## SW ENGINE TIMING TOOL SET, VW 1.5-TSI PETROL

This engine timing tool kit allows the user to set and check the timing of Volkswagen Group EA 211 3 and 4-cylinder TSI petrol engines without the need for computerised tools. The kit includes a battery-operated digital inclinometer which, in combination with precision-manufactured adapters and alignment tools, enables accurate timing adjustment. Connection to the vehicle's OBD system is not required as long as the adjustment processes are carried out correctly in accordance with the operating instructions.

Suitable for the following vehicles:

- Audi (from 2017), for Seat (from 2017), for Skoda (from 2017) for Volkswagen (from 2017)

Engine codes: DACA, DACB, DADA, DFYA, DPBA, DPBE, DPCA

With hanging hole

The particularly easy-to-grip and ergonomically shaped 2K handle enables safe working.

Chrome Vanadium

Blade length 230 mm

Hexagon drive

The neodymium magnet placed in the key insert reliably holds the screws/nuts in place and secures them against falling out. This means that even deep-seated screws or nuts can be mounted reliably.

## THE SET

Chromium vanadium, magnetic, with hanging hole.

- 8 x 230mm
- 10 x 230 mm

for VAG vehicles WITHOUT tensioning roller. Here, the belt is tensioned via the spring-loaded generator. With the aid of this key, the generator can be turned accordingly to slacken the belt, e.g. during replacement work. The 12,5 mm (1/2") drive is attached in a star shape and thus allows the tool to be inserted in different ways depending on the space available. The pins are knurled, reducing the risk of the key slipping out of the generator.

**SW STAHL TIMING BELT INSPECTION TOOL, CITROËN/OPEL/PEUGEOT/TOYOTA**

Some engines use timing belts that run in an oil bath. Ageing or using the wrong engine oils can change the structure of the timing belt, increasing its width. With this inspection tool, the width of the timing belt can be checked quickly and easily. This check must be carried out during all maintenance work (every 12 months or 20,000 km). To do this, remove the oil filler cap and measure the width of the timing belt.

# A STORY OF SUCCESS

## THIS IS WHAT WE STAND FOR GERMAN QUALITY STANDARDS

Even today, almost all products are manufactured in Germany. And proven German quality standards are still required and met even for the few components not produced in Germany.

**TECHNICAL  
INNOVATION**  
MADE IN GERMANY

## SAUER today...

In 2015, the hand and special tool specialist SW-Stahl GmbH took over the SAUER brand rights. Since then, an experienced team of technicians, automotive experts and an accomplished sales and marketing team have been developing a concept to successfully re-establish SAUER in the tool market. To this end, many creative ideas were implemented, improved tool versions were developed and new, problem-solving products were devised. The result is a comprehensive range of intelligent special tools that offers the optimum solution for every possible application. With the focus on quality and functionality, the basic idea of the "old" SAUER is taken up and continued. SAUER products are modular in design, function across all brands and are permanently adapted to the latest technical developments in the automotive market. In this way, investments for the workshop can be reduced.

The SAUER team is the ideal partner when it comes to solving specific repair issues. The experienced technical staff are familiar with the daily problems in the workshop and work continuously on the development and optimisation of intelligent special tools.
